

ABSTRACT OF THE DISCLOSURE

An image-formation system includes an image display function which displays, at a display section, images of a plurality of desired original monochromatic images for output among original
5 monochromatic images for output which are stored in an image storage means; a page combining function which forms an original multicolor image for output by combining, in page units, a plurality of images which are displayed at the display section; a color setting function which sets colors at a time of output
10 from an image output means, for a plurality of images which are displayed at the display section; and a preview function which superposes images, which have been colored by the color setting function, so as to be in a state at the time of output from the image output means, and displays the images at the display
15 section.
